Oracle

Customizing advanced telecom/banking solutions, we at Database Link consider Oracle as one of our core back-end database. Therefore, a partnership program has been developed with Oracle CIS Corp for providing database services to our corporate clients.

Services

- Oracle database administering
- Oracle database design
- Oracle back-end development
- Oracle GUI development
- Application development
- Oracle/non-Oracle integration
- Capacity planning
- Disaster recovery planning
- Performance tuning
- Oracle applications support
- Oracle Application Server
- Oracle content manager
- Process automation
- Java development support
- SQL and PL/SQL support

Approach

- We analyze your business and design the very new high-end system throughout all project stages. We design database and Internet/web applications. The solution is strongly customer-focused and developed in accordance with business specifications.
- We specialize in data modelling, database development, and 2/3-tier application development. Also we provide corporation data warehouse and departmental data mart implementation.
- Our experts have internationally recognized qualifications, and from 4 to 20 years of extensive experience in various fields - from real-time systems to B2B, B2C, C2C, and B2G applications.
